WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make 2. Barrel: pipe 168.3 OD x 4.5 wall, 280 long, ends square.

Flanges: two discs 330 OD, 6 mm plate, 40.5 mm centre hole.

Rope hole: 14 mm in the right flange, 94 mm above the centre.

Brake rim: 50 x 6 flat bar rolled to 330 OD, butt welded, welded to the outside face of the left flange, flush with its edge.

Shaft: C45 (EN8) bright bar 40 mm, 592 long. The right flange's outer face is 185 mm right of the shaft centre (its middle).

Weld flanges to barrel all round; weld shaft to both flanges.

Keyways 12 mm wide, 40 long at both ends for the gear and ratchet.

Turn the brake rim true on the shaft after welding (0.5 mm).

Galvanise barrel and flanges; mask and grease the shaft ends.

Fit: the shaft runs in the 40 mm flange bearings; 15 mm gap to the right cheek, 43 mm to the left. Mass about 21 kg.

Check: spin it on the shaft; the rim runs true within 0.5 mm.
