WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make 2. Shaft: C45+QT, 690 long; 30 mm for 490 in the middle, 25 mm outboard, 1.5 mm fillets at the steps; ends chamfered.
Keyway 8 mm wide, 40 long, for the pinion, from 253 to 289 mm right of the shaft middle.
Cross-pin holes 8 mm through, 20 mm in from each end, for the crank hub pins.
Pinion: bought, module 4, 14 teeth, 35 face, teeth induction-hardened, bored 25, keyed and held by a set screw. Its teeth line up with the gear's face.
Fit: the shaft runs in two 30 mm flange bearings on the cheeks, 756 mm above the ground and 196 mm above the drum centre. The pinion sits outside the right bearing, inside the guard.
Check: the shaft turns by hand in its bearings with the pinion meshing the gear; a feeler shows backlash of 0.2 to 0.5 mm.
