WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make 4: a right and a left handle per capstan (mirror images).
Hub: 50 OD, 40 long, bored 25 for the shaft; 8 mm cross-pin hole 20 mm from the inner end. The hub slides on the shaft end.
Arm: flat bar 40 x 10, 330 mm between the shaft and grip centres, ends rounded R20; welded to the outer end of the hub.
Grip: 32 mm tube 120 long turning on a 16 mm pin welded to the arm; washer and split pin on the outer end.
On the capstan the two handles sit 180 deg apart, so one person pushes while the other pulls.
Galvanise; grease the grip pin.
Fit: hub on the 25 mm shaft end; cross pin and split pin hold it.
Handles come off before any paying out under load.
Check: the grip spins freely; the hub cannot slide off with the pin in.
