WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Band: steel strip 40 x 3 mm, about 760 long, rolled to 340 ID;
woven brake lining 5 mm riveted inside with countersunk rivets.
The band wraps about 245 deg round the brake rim on the left flange,
open toward the rear bottom.
Ends: a 10 mm link from each end. The upper end goes to the pivot
pin; the lower end goes to the inner arm, 50 mm from the pivot.
Pivot: 20 mm shaft through a 21 mm hole in the left cheek, 200
behind and 330 above the ground. Inner arm inside, lever outside.
Lever: 25 mm bar, 600 long, rising at 62 deg toward the rear; grip
at the top. Lifting the lever tightens the band.
134 N on the grip holds the rated 3 kN pull with a wet lining.
Fit: lining 2 to 3 mm off the rim when the lever is down.
Check: lever up, the drum cannot be turned by hand at the rim.
