WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make 3. Skid: UHMW-PE bar 60 x 20, 450 long; cut a 45 deg nose 14 mm deep on the front bottom edge so it rides over crystals.

Two 11 mm holes 40 and 100 mm from the back of the nose, counter-bored 20 mm, 12 deep from below so the bolt heads sit inside.

Hanger: stainless 6 mm plate 60 wide, bent to an L: upright leg 130 tall, foot 120 long.

Upright: two slots 11 wide x 24 long, centred 65 and 115 above the foot. The slots set the blade 5 to 25 mm above the floor.

Foot: two 11 mm holes to match the skid.

Fit: the upright bolts flat to the beam's back face with the blade bolts' neighbours; the foot sits on the skid, M10 bolts.

Set all three skids to the same height with a 10 mm spacer under the blade edge on a flat floor.

Check: blade edge 10 mm above the floor along its whole length.
