WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make 2 (a left and a right, mirror images).
Cap: 6 mm stainless folded to a channel round the beam end: top and bottom 126 long x 106 wide, rear 112 tall; end plate 121 x 112 welded across the end, reaching forward over the blade end.
Inside width 100, so the cap slides on the beam; front open for the blade.
Two 13 mm holes top and bottom, 40 and 80 mm from the end plate.
Eye plate: 12 mm, 50 out from the end plate, 225 long front to back; two 18 mm eyes 175 apart, the front eye 25 ahead of the blade face. Weld to the end plate both sides.
The front eye takes the pull bridle, the rear eye the return bridle.
Fit: M12 bolts with crush sleeves through cap and beam.
Check: a 10 mm bow shackle pin passes each eye.
