REVISION HISTORY

Version	Date	Author	Change
0.1	2026-10-24	Amish Chadha	First user requirements (kit 1.8 upgrade), drawn from the users and stakeholders in SDG-PRB-001

SaltDrag user requirements

What the people who would make, use, fund and permit SaltDrag need, written from their side. Product requirements that meet these needs are in SDG-PRS-001 (`03-requirements.md`) and the links are in the traceability matrix SDG-RTM-001 (`03b-traceability.md`). The sources are the user and stakeholder tables of SDG-PRB-001 (Tables 1 and 2). None of these needs has yet been checked with an Agariya family or a producer organisation; the co-design partner reviews them before any trial. Method: STANDARDS section 22.

Table 1. User requirements.

ID	Category	Title	Need	Priority	Source
UR-001	Usability	Stay out of the pan	We gather the salt without standing in the brine or walking on the pan at any stage of the work	High	Agariya salt-making families; women salt workers (PRB Table 1)
UR-002	Usability	Effort we can keep up	Women in the family can work the tool through a working session without great upper-body strength	High	Women salt workers (PRB Table 1)
UR-003	Performance	Gather as fast as now	We gather at least as much salt per person per hour as with the dantala, so the tool does not cost us time	High	Agariya salt-making families (PRB Table 1)
UR-004	Performance	Keep the floor and the crystals	The hand-hardened pan floor is not cut or cracked and the large crystals are not crushed	High	Agariya salt-making families (PRB Table 1)
UR-005	Logistics	Carry it between pans	Two to four of us can carry every part between pans and along the bunds	High	Agariya salt-making families; producer groups (PRB Table 1)
UR-006	Environment and durability	Last the season	It keeps working through a harvest in brine, salt, heat and dust if we rinse it each day	High	Agariya salt-making families; producer groups and NGOs (PRB Table 1)
UR-007	Deployment and assembly	Quick to set up	We can set it up at the start of a working session without losing the cool hours	Medium	Agariya salt-making families (PRB Table 1)
UR-008	Cost	Affordable to fund	A producer group or NGO can fund a set within its budget for a pilot, and the cost is known	High	Producer groups and NGOs (PRB Table 2)
UR-009	Safety	No new injuries	Nobody is hurt by a loaded rope, a crank or gear, or an anchor that pulls out	High	Agariya salt-making families; women salt workers; producer groups (PRB Tables 1 and 2)
UR-010	Regulatory	Within our access conditions	The tool is hand powered, with no engine or motor, so it fits the conditions under which we may work in the Rann	High	Forest department; Agariya families (PRB Table 2)
UR-011	Maintenance	Build and repair in town	A workshop in a town near the Rann can build it and repair it from common steel, plastic and bought parts	Medium	Local fabricators (PRB Table 1)
UR-012	Performance	Reach across our pans	It reaches across the pans we work, which are tens of metres wide	Medium	Agariya salt-making families (PRB Table 1)
UR-013	Regulatory	Leave nothing behind	It leaves no structure or lasting mark in the sanctuary when we move on	High	Forest department (PRB Table 2)

ID	Category	Title	Need	Priority	Source
UR-014	Usability	A family crew	A family crew of about four can work it without hiring extra hands	Medium	Agariya salt-making families (PRB Table 1)
UR-015	Maintenance	Easy daily care	Daily care is a rinse and a little grease, and the parts that wear can be replaced on the spot	Medium	Agariya salt-making families; local fabricators (PRB Table 1)

Categories: deployment and assembly, performance, usability, safety, environment and durability, logistics, maintenance, cost, regulatory. Priorities: High, Medium, Low.
